SBELLA® Echinacea is probably the most extensively researched immune stimulant and tonic. German research has shown that echinacea stimulates the immune system and is especially effective against viruses. Well over 100 scientific research studies on echinacea have been published. Some of the historically more important studies illustrate echinacea's broad spectrum of use for prevention and treatment.

SBELLA® Echinacea has been proved by herbalists to be effective in combining allergies. Experiments to establish echinacea's preventive qualities, conducted in Germany in 1978, determined its effectiveness in the treatment of allergies. Echinacea helps prevent inflammation of tissue (histaminic reactions) which can result from harmful, foreign toxins.

SBELLA® Echinacea is useful and preventing a variety of everyday ailments. It is excellent for treating the causes of fever, infection, cold or flu. North American Indians routinely used it for snake bites and insect bites.

SBELLA® Echinacea reduces the pus present with an infection, stimulates digestion and corrects bluish discoloration of the mucous membranes. Also, for over 100 years it has proven useful in most diseases caused by impurities in the blood or lymph.

To use Echinacea long-term as a blood and lymphatic stimulant and purifier it should be taken through the skin, the primary means of toxin elimination.

Children also respond very well to Echinacea and there are no generally recognized side effects.
